INTRODUCTION

The data presented in this publication categorize Utah firms by the number of employees working for them during March of the specified year. By grouping firms with a similar number of employees, it is easier to analyze the counties and industries containing Utah's smallest and largest employers. It is also possible to determine growth trends by size group, to measure which group is providing the most employment, and to identify which group is paying the highest or lowest wages within an industry.

The number of reporting units in Utah differs somewhat from the actual number of firms. The term "reporting unit" is used to identify any firm, organization, division, or establishment for which data are separately maintained by the Utah Department of Employment Security.

Effective with first quarter 1980, employment and wage data are being maintained separately for each industrial activity and each worksite location in the state, with some notable exceptions. These exceptions are primarily construction and mining where mobility of employment prohibits establishing a permanent worksite. In such cases, county level data are maintained. For each multiple worksite employer, data are maintained by worksite location. In Utah, roughly 2,100 firms are multiple worksite employers responsible for approximately 9,900 worksite units. As a result of this worksite concept, the reporting unit count used in this publication is larger than the actual number of firms or employers.

SECTION I

EMPLOYMENT, WAGES AND REPORTING UNITS BY FIRM SIZE AND INDUSTRY IN UTAH FIRST QUARTER 1988

SECTION 1

REPORTING UNITS, EMPLOYMENT AND WAGES IN UTAH, BY FIRM SIZE

The Utah Department of Employment Security collects and compiles employment and wage information from all Utah non-agricultural employers each quarter. This information is collected at the individual establishment level, i.e., each individual store, plant or other permanent worksite facility. For purposes of this publication, these individual establishments are termed "reporting units." Since each reporting unit is assigned an industry and county code, the employment and wage information can be summarized into industry or county classifications by group size.

For the first quarter of each year, reporting unit statistics are summarized into nine size categories. These categories, based on employment levels, are 0-3, 4-9, 10-19, 20-49 50-99, 100-249, 250-499, 500-999, and 1,000 and over. In Utah there is an inverse relationship between number of firms and size class, i.e. the higher the size class, the lower the number of firms. This inverse relationship exists because Utah's employer makeup is one of many small size firms and relatively few large ones. In fact, over one-half of Utah's employers employ fewer than four workers and 97.7 percent employ fewer than 250.

The employment distribution among these nine categories is considerably different than the firm distribution. For instance, over one-half of the number of firms are in the 0-3 category, but only 5.6 percent of the nonagricultural employment is included there. Actually, the highest employment concentrations cluster around the middle ranges and in the largest (1,000 and over) category. The three middle categories (20-249 workers) contain over 46 percent of the nonagricultural employment.

For the most part, total wages within each size category show a pattern similar to employment with one notable exception. The 1,000 and over size category contains the highest amount of wages with 19.7 percent of the total. The three middle size groups, as with employment, contain the highest total wage levels.

Average monthly wages show a relatively strong correlation to the nine categories. Except for the first size group, the level of average monthly wages increases in proportion to each step in the nine size categories. This correlation of average monthly wage to size class at the total level does not, however, hold true for all industries. For instance, Finance, Insurance and Real Estate posts its highest average wage levels in the middle categories. Services shows a mixed pattern with higher average wage levels in the first two size groups and lowest wage level in the eighth size category. The other industries do show a general correlation of average wages to size group except that often the smallest size class shows a higher average wage level than the next size group.

*Prior to 1980, employment and wage data for each firm were separately maintained for each county and/or industry of operation. Effective with 1980, data for each firm are maintained at the individual worksite level. As a result, the 1980 Reporting count is inflated relative to earlier years and growth comparisons would therefore not be valid. Also, a number of firms previously categorized in the larger size categories, are now broken down by worksite and fall accordingly into smaller size groups.
